

Architect as a Service

AaaS is a service for companies that don't have such expertise in house or other organizations needing a fresh opinion or perhaps starting a unfamiliar process, such as a modernization or cloud migration.

Architect as a Service (AaaS) is a team of Software Architects and Technology Experts that augment the client's existing technical team or function as the in-house architect on both the **solution** and the **technical levels**. This team acts as:

- Management advisor
- Sparring partner
- Trainer of the development team
- Process consultant
- Quality guardian of the product model

BENEFITS

- Having access to a pool of experts with a suitable set of skills and experience
- A cost-effective way to have the expertise without having to hire a full-time architect
- Freeing up resources to focus more on the core competencies
- Tailoring solutions for specific business problems
- Faster implementation and gaining more flexibility
- Getting a second opinion on architectural foundations before starting the expensive development
- Temporary high-level expertise for a specific project or new innovation

THE TEAM

- 2 to 3 members
- Specialized in the areas you need: frontend, backend, or database
- Experts with a proven track report
- Members of the Yonder Techboard
- The team is lead by a Lead Architect
